Forestry in Sweden

Harvester

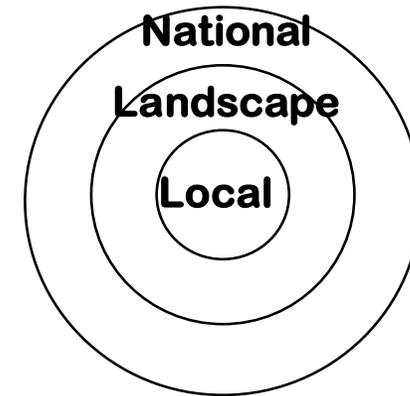

Forwarder

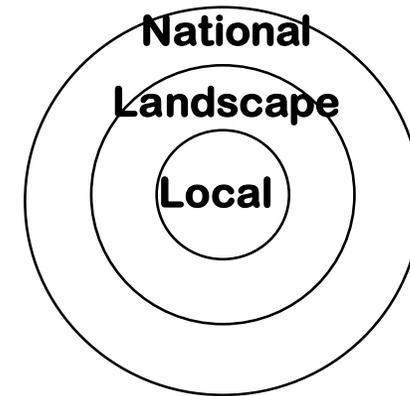

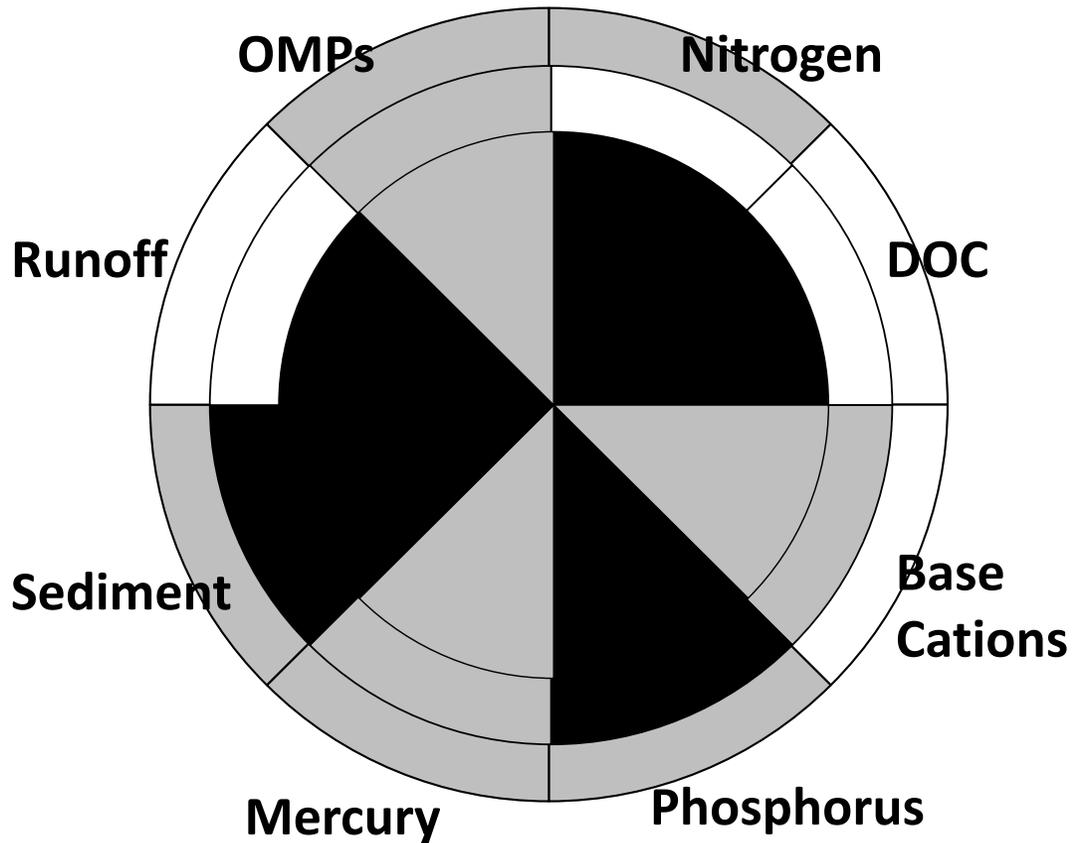

- Sweden provides 10% of global wood/pulp trade
- Intensive forest management
- Big machines
- Automation

Water quality issues in Swedish Forests

Water quality issues caused by forestry

Black means that forestry is the primary cause of deterioration in water quality.

Driving on forest soils

Compacted soils/Track formation

Decreased production

Change in hydrology /
Erosion / sedimentation

Leakage of N, P, Hg...

Kill plants & animals,
destroy habitats

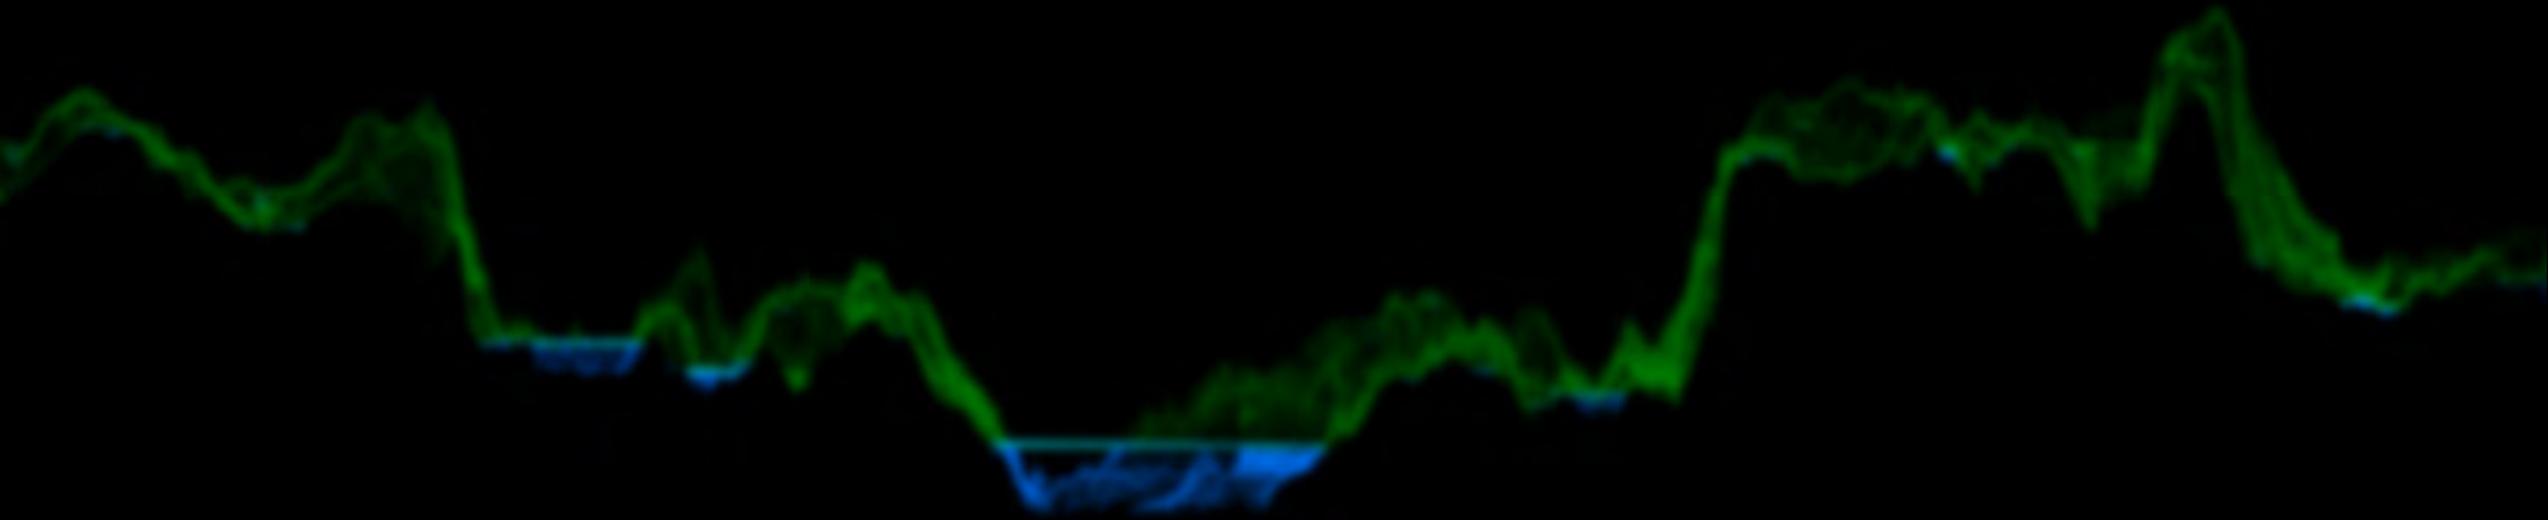

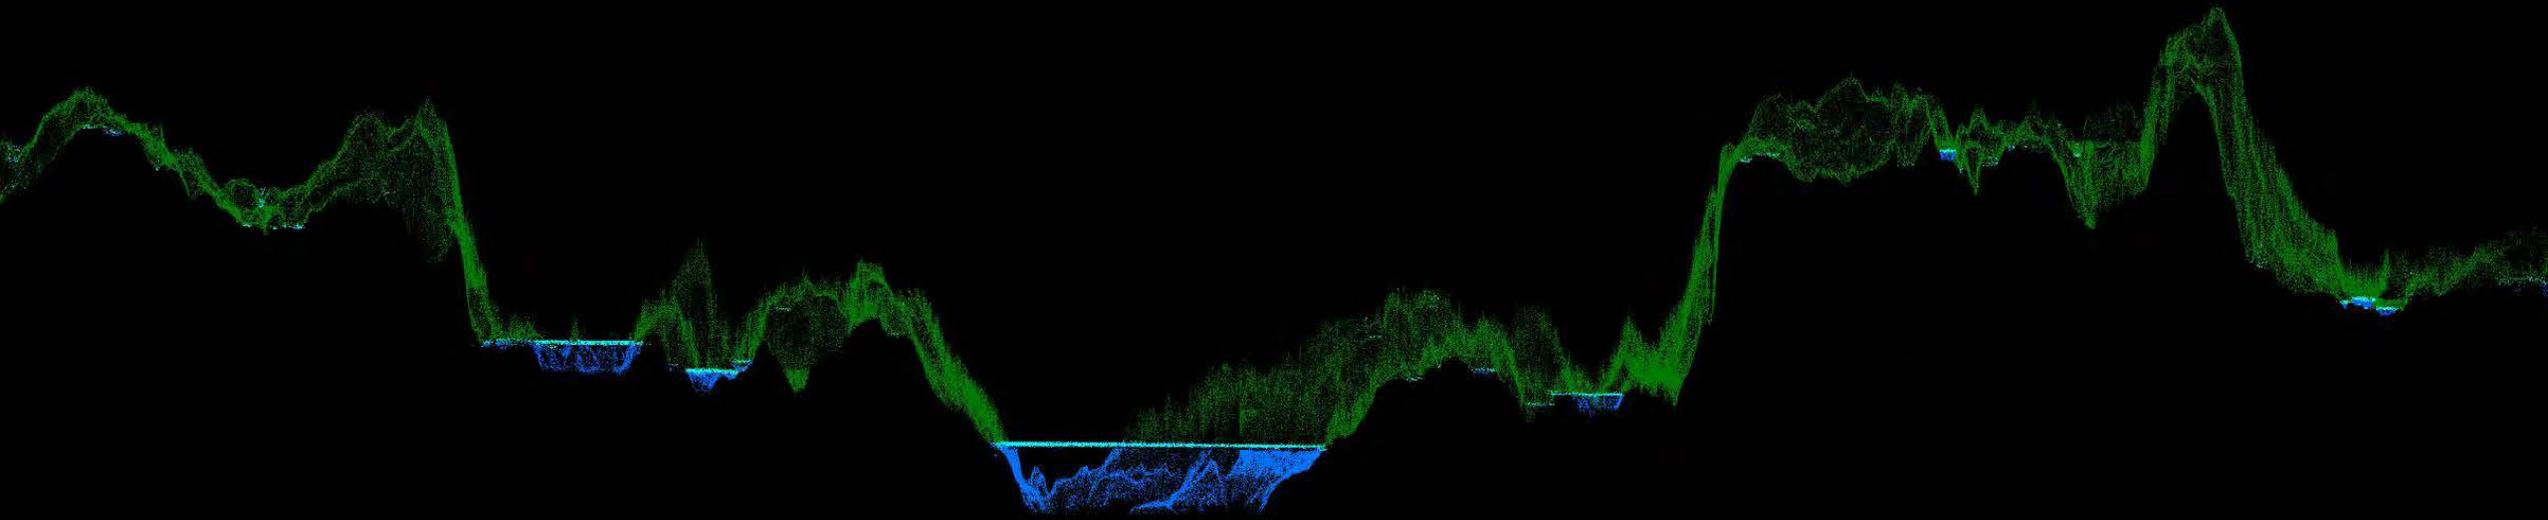

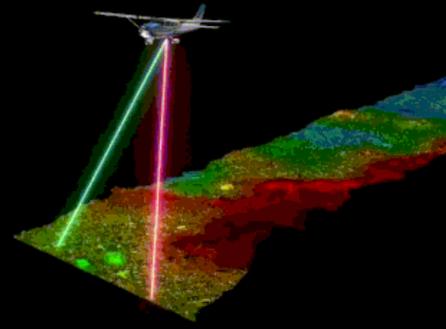

Environmental targets

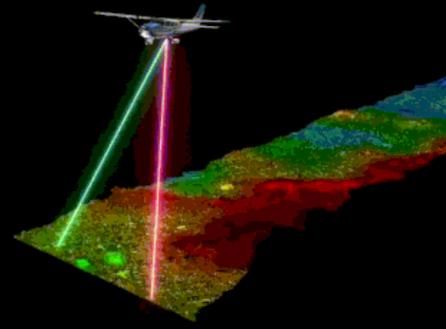

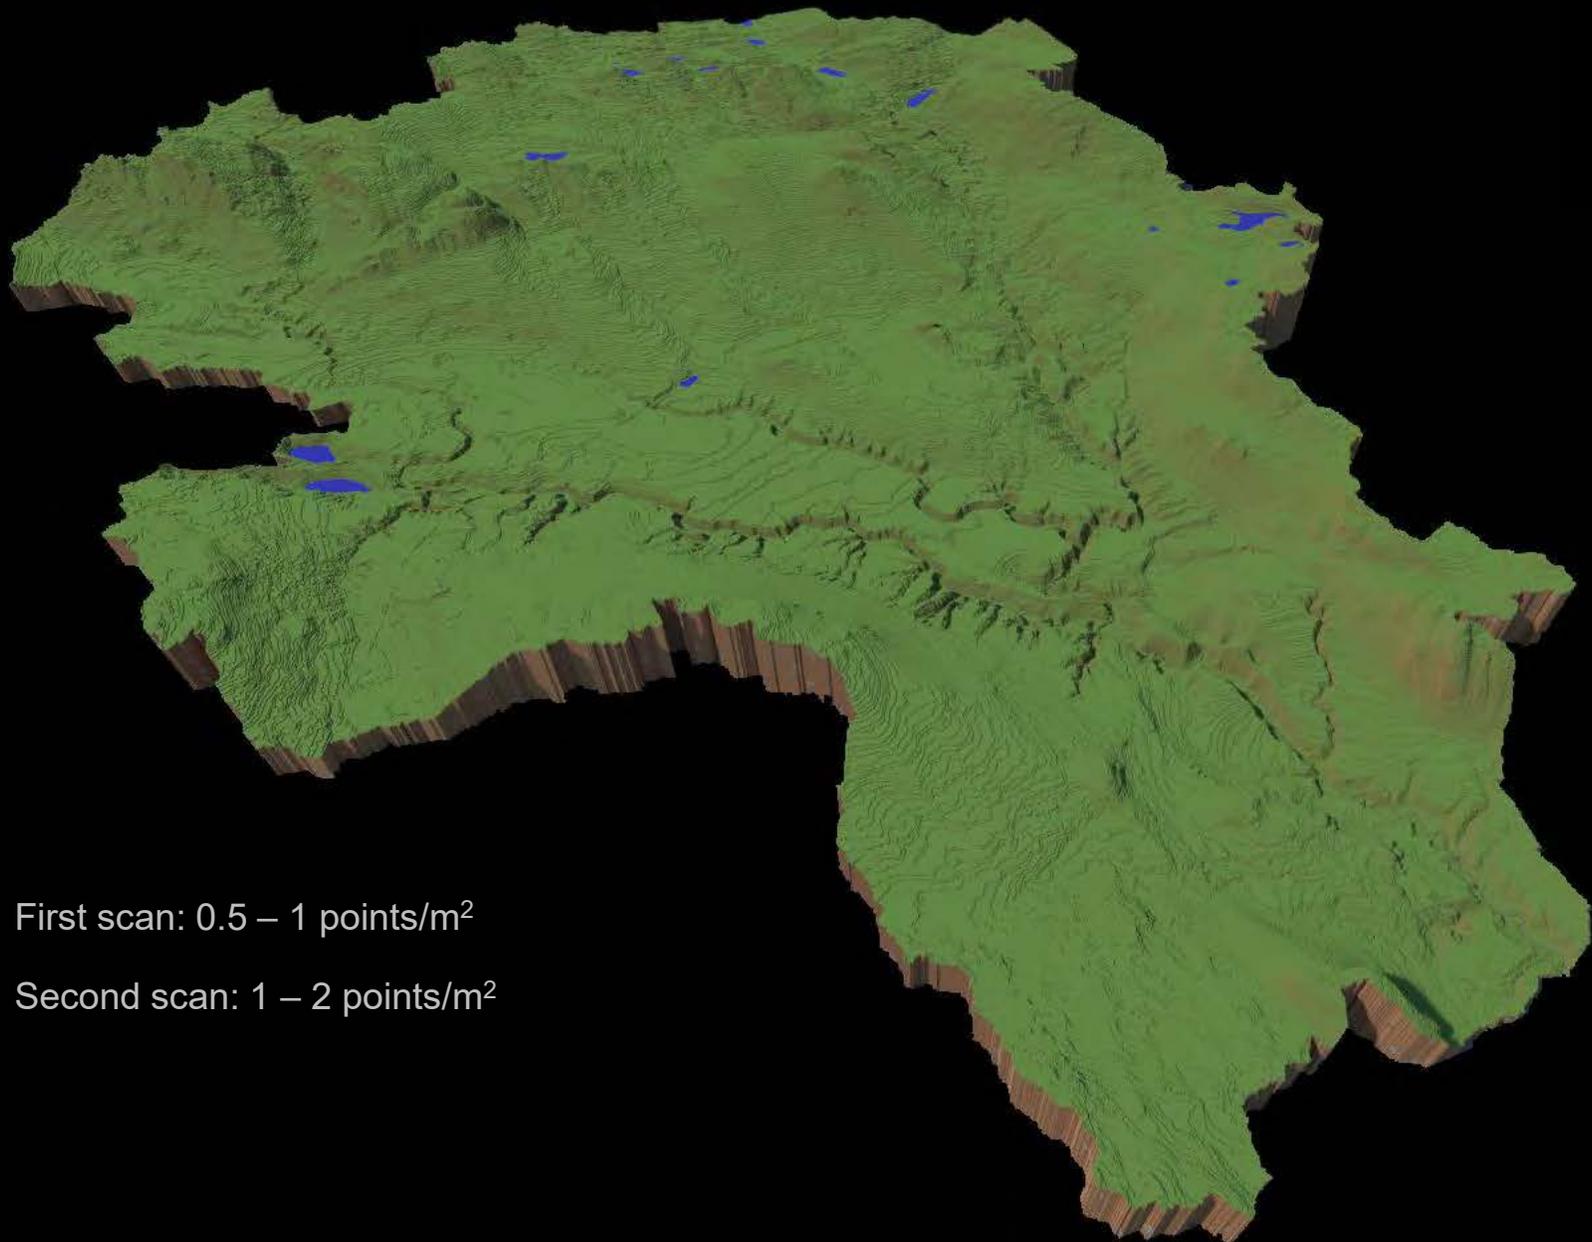

LiDAR

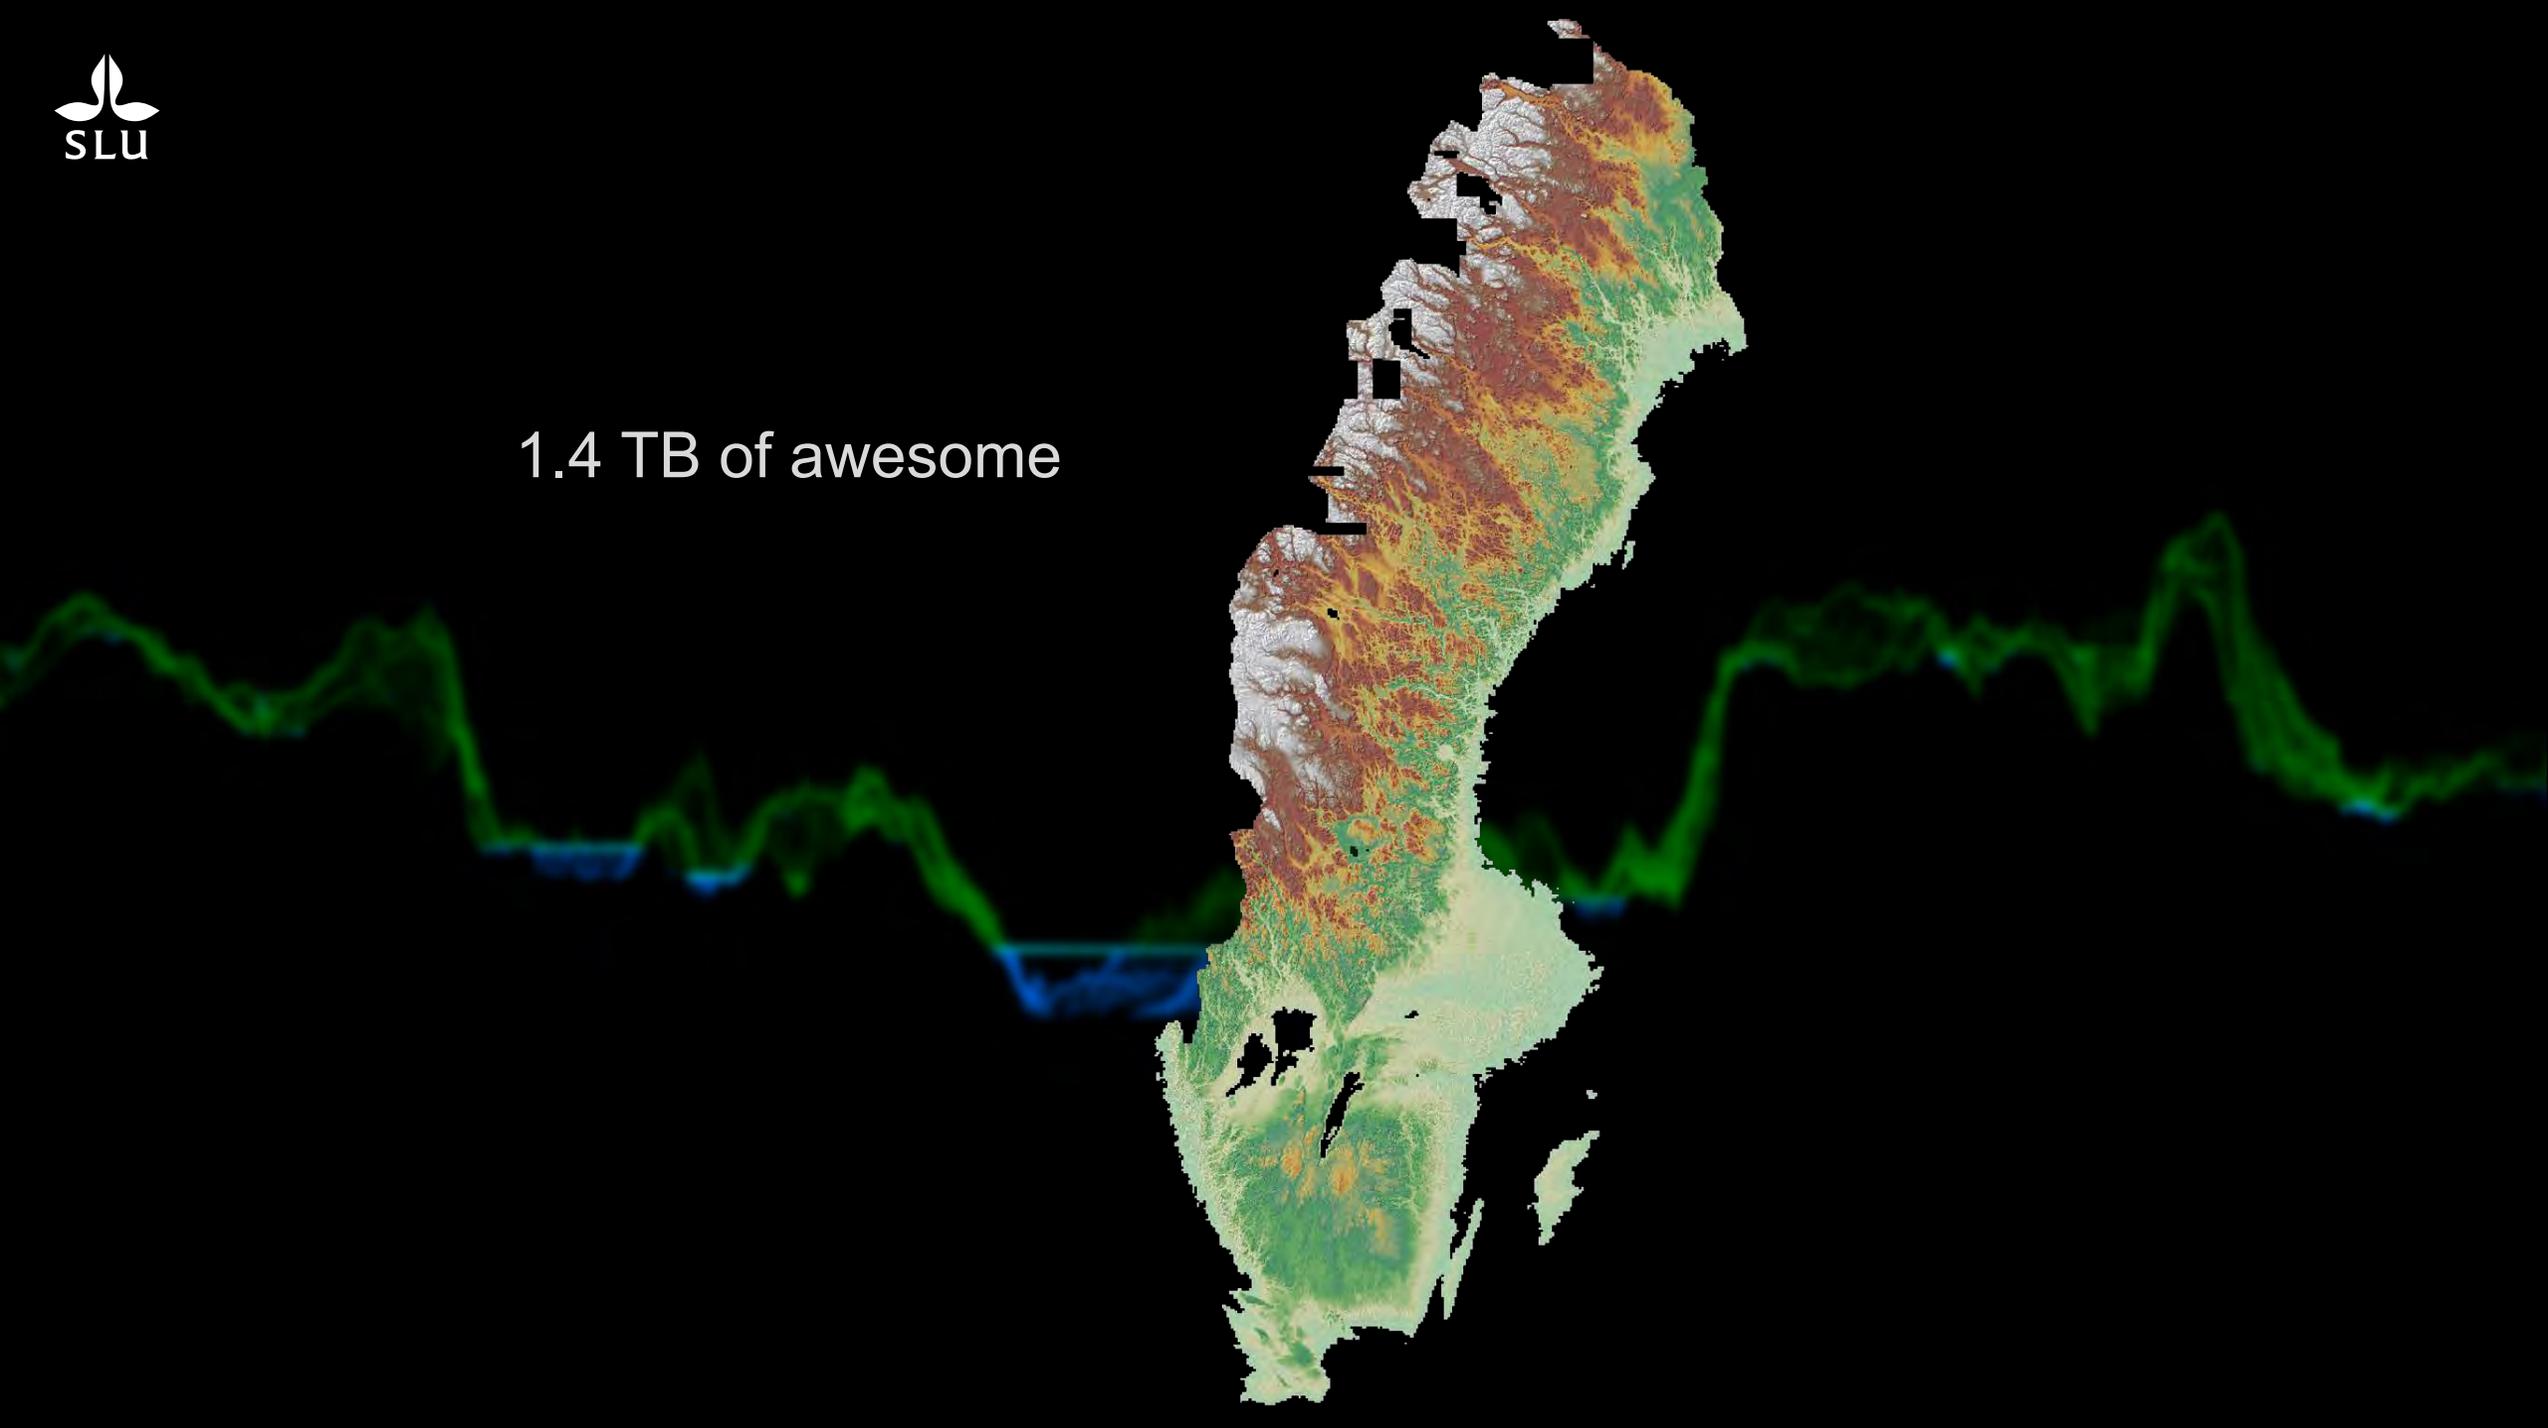

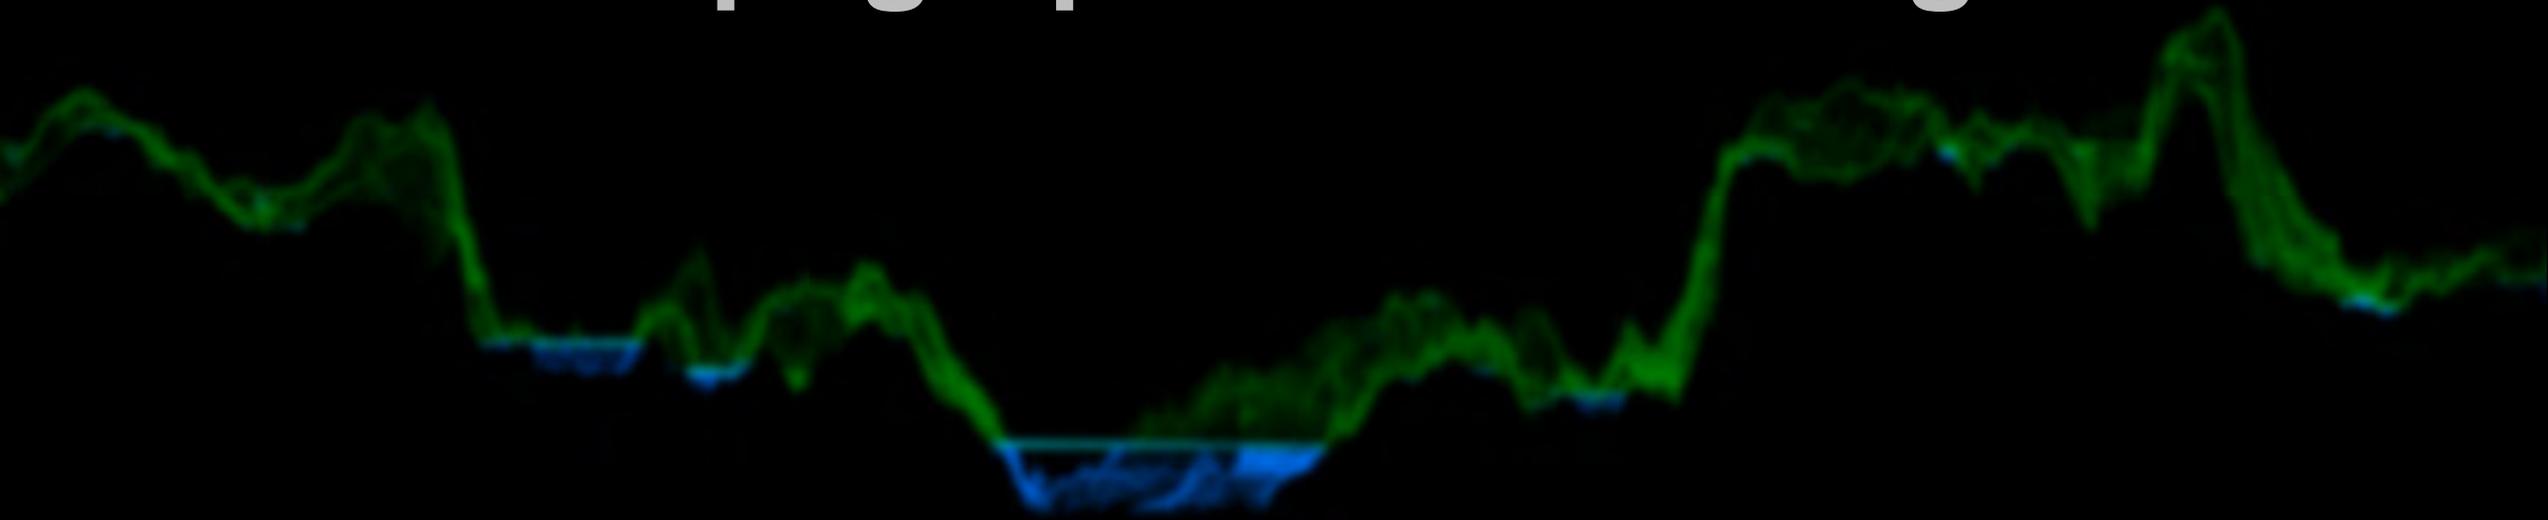

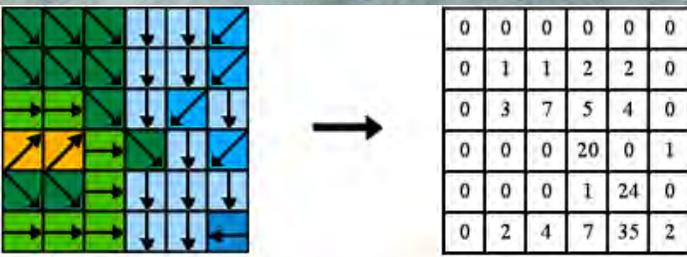

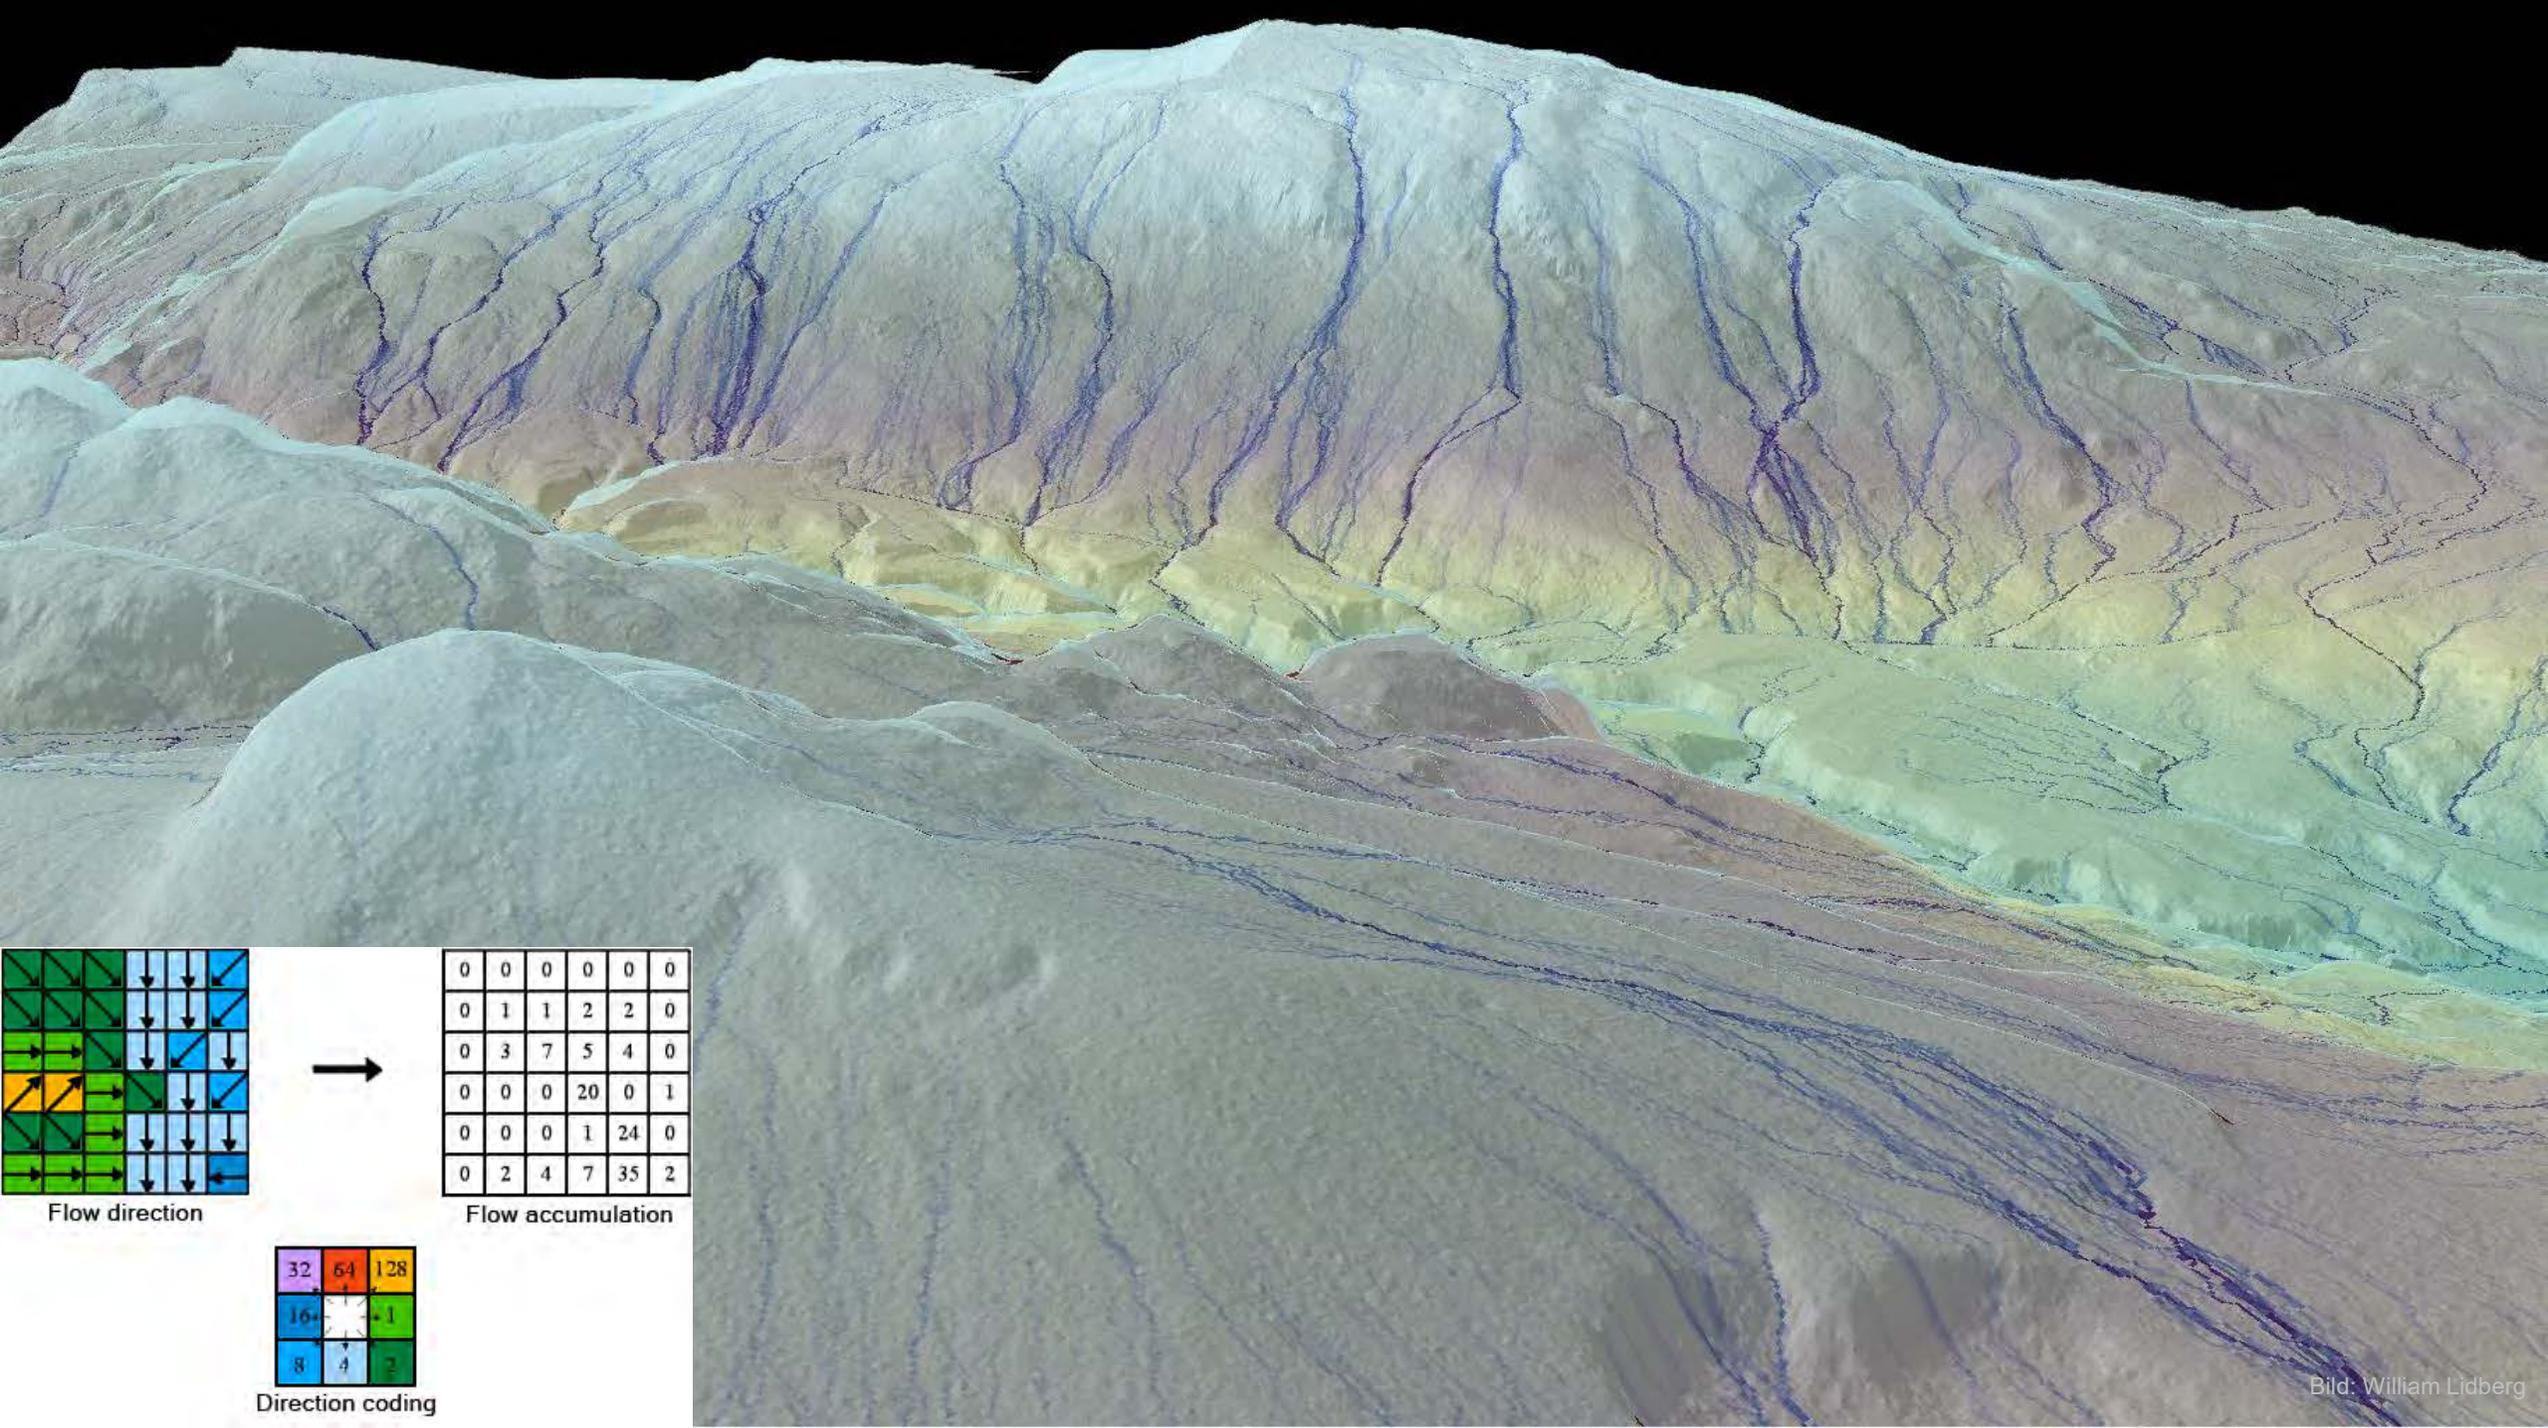

- First scan: 0.5 – 1 points/m²
- Second scan: 1 – 2 points/m²

A satellite-style map of Sweden and surrounding regions, including parts of Norway, Denmark, and Iceland. The landmasses are shown in dark grey and black, representing topography. The sea is a deep blue. A large, irregularly shaped area covering most of Sweden is highlighted with a vibrant, multi-colored pattern of yellow, orange, and green, representing soil moisture data. The text "SLU Soil moisture map" is overlaid in white in the upper left quadrant of the map.

SLU Soil moisture map
